

# installation guide-

Installing your canopy is easy and does not require and specialist tools but make sure you familiarize yourself with the process involved before starting.

1. Clear the area before starting making sure the space is clear of obstruction.

8. Connect one end of the rigging screw to each corner of the canopy using the locating pin.

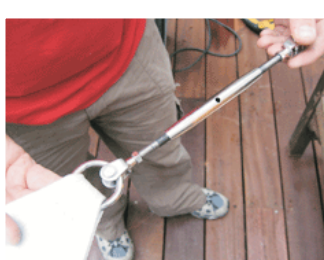

2. Using the supplied drawing as a guide measure the locations for the fixings.

9. Connect the securing pin.

3. Carefully drill the holes for the appropriate fixings.

10. Corner of canopy with rigging screw attached, fully extended ready for fitting.

4. Add the fixing to all the locations.

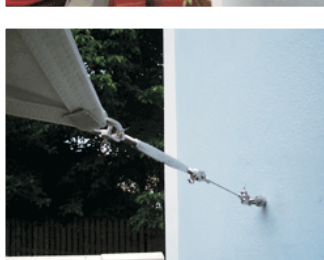

11. Attached the rigging screw to the fixing at each corner. A section of rope can be used to establish the correct sails position and replaced with the cable shown.

5. Take all of the rigging screws in turn and rotate the body of the screw while holding the end, to extend its length

Once attached tension the canopy by rotating the body of the rigging screw while holding once end. You must rotate it so that it becomes shorter.

12. Continue to tension the canopy at each corner equally - until the canopy is taut and creaseless.

6. Rigging screw fully extended ready to be attached to the canopy

12. The canopy should look smooth and taut. Note that this canopy has been installed with a twist in the fixings to improve water run off.

7. Rigging screw fully extended compared to non-extended.
